

Chung Heng(Winston) Chang

chan2508@umn.edu - 6127153992 - <https://winston-personal-site.pages.dev> - He/Him

Education

University of Minnesota, Twin Cities,
College of Liberal Arts

Minneapolis, MN
Anticipated: 06, 2028

Bachelor of Arts in Computer Science

Certifications

- Certificate of Microsoft Technology Associate in Python
- Oracle Certified Associate, Java SE 8 Programmer
- Institute for Information Industry(TW) - Competency Certification in Generative AI Office Applications

Work Experience

Soft-World(Video Game Company)

Kaohsiung, Taiwan

Full Stack Developer-Intern

2024/07/01 - 2024/08/31

- Optimized the company website for better performance and scalability by reducing redundant code and optimizing the algorithm
- Configured CDN-based static asset delivery to offload origin traffic and improve delivery performance for high-volume product media.
- Debugged and resolved issues with embedded 3D models by embedding the other 3D models module on their website
- Diagnosed and fixed database connection and performance issues

High School Coding Club

Kaohsiung, Taiwan

Coding Club Instructor/President

2024/02/01 - 2024/06/30

- Led weekly lessons on web development and programming fundamentals, from the beginning of Python to OOP
- Organized and hosted a coding competition
- Mentored members in building and launching their websites, like the Calculate Revenue Tax Website, the Auto Email Send System, etc

Institute for Information Industry(Taiwan)

Taipei, Taiwan

Full Stack/App Developer - Intern

2026/07/01 - 2026/08/31

- Developed a commercial AI temple oracle platform with online prayer, fortune drawing, divination blocks, AI interpretation, and donation/payment integration.

- Built frontend features with Vue 3, HTML, SCSS, and interactive animations to create an immersive digital temple experience
- Implemented backend APIs with Django and MySQL for divination sessions, fortune results, interpretation flow, and data management
- Designed AR-ready interaction concepts, including mobile camera overlays, virtual fortune sticks, guided ritual animations, and visual/audio feedback
- Participated in career development training, including resume writing, interview preparation, job application strategy, and workplace communication
- Completed AI application training covering prompt engineering, AI-assisted development, and practical use cases for business/product development

Skills

- **Programming Languages:** Python, Java, HTML, SCSS, SQL, Javascript, C++
- **Language:** English, Mandarin, Taiwanese
- **Developing Skills & Application**
 - **Frontend:** Vue 3, Responsive Web Design, UI Animation, AR-ready Web Interaction
 - **Backend:** Django, Django REST Framework, RESTful API Design, MySQL, PostgreSQL
 - **Data & Automation:** AI Integration, Prompt Engineering, Data Analysis, Web Crawling, Pandas, API Integration
 - **Tools:** Git, GitHub, VS Code, Postman, Microsoft Office, Cloudflare, AWS Lightsail, Render, Pycharm

Projects

- **Goldy Treat Project (GDT) — Full-Stack/Mobile App/ RAG**
 GitHub: github.com/Winston95213/GDT | Link: <https://gdtumn.com>
 Django, Python, JavaScript, HTML/CSS, OpenAI API, AWS Lightsail, Nginx, Unicorn
 - Architected and deployed a production full-stack campus platform integrating restaurant discovery, student deals, events, organizations, and schedule-aware recommendations.
 - Built a retrieval-augmented generation (RAG) dining assistant that grounds LLM responses in verified restaurant data using location, budget, operating hours, food intent, and user preferences.
 - Engineered automated deal-ingestion pipelines with scheduled web crawlers, normalization and review workflows, search/filtering, and eligibility rules for member-exclusive offers.
 - Designed role-based organization and merchant workspaces supporting memberships, events, posts, media, RSVP, moderation, analytics, and restaurant deal management.
 - Operated the production stack on AWS Lightsail using Nginx, Unicorn, HTTPS, caching, background jobs, deployment automation, and automated Django tests.
- **AI Temple Oracle Platform — Full-Stack / AR, AI Product**
 GitHub: github.com/iiii-project | Link: iii.dev-serve.me (might change based on the customer)

- Built a commercial AI-powered temple-tech platform using Vue 3, Django, PostgreSQL, and REST APIs for online prayer, fortune drawing, divination confirmation, AI interpretation, and donation/payment workflows.
- Designed session-based backend architecture to manage user questions, fortune sets, draw results, interpretation state, and temple-specific deployment customization.
- Created an immersive AR-ready ritual experience with camera-based interaction, virtual fortune sticks, guided animations, and visual/audio feedback for on-site temple visitors.
- Integrated AI interpretation workflows to generate personalized explanations based on user questions, fortune results, and cultural context.
- Developed the product around a B2B temple digital-transformation model, with planned contracted deployment at Songshan Fengtian Temple.

- **E-commerce Web App for Price Comparison**

GitHub: github.com/Winston95213/PCW

- Architected and built a full-stack e-commerce price-comparison platform that aggregates product listings across online retailers and surfaces the lowest available price.
- Designed a resilient, pipeline-based web-crawling system to collect, normalize, and persist product and pricing data for reliable cross-store comparisons.
- Developed a responsive Vue 3 single-page experience backed by Django APIs, including product discovery, search, authentication, and shopping-cart workflows.
- Implemented secure user registration and login flows, along with persistent cart management to help users save and track preferred products.
- Modeled product, retailer, user, and pricing relationships in MySQL to support scalable querying and accurate price comparisons.
- Integrated frontend and backend services using Axios-based API clients, with clear separation between UI, business logic, and data-collection components.
